

A commercial gas tee (T) fitting is a three-way connector used in heavy-duty food service or industrial gas lines to split or merge LPG/natural gas flows. These solid brass or galvanized iron components handle high-pressure multi-burner setups safely. [[1](#), [2](#), [3](#), [4](#), [5](#)]

Key Features

- **Material:** Heavy-duty forged brass or coated steel for rust resistance.
- **Design:** Three-way branch configuration for splitting a single supply line into two or more burner feeds.
- **Application:** Commercial kitchens, restaurants, hotels, and industrial bhattis. [[1](#), [2](#), [3](#), [4](#), [5](#)]

Safety and Installation Tips

- **Leak Prevention:** Use thread seal tape (PTFE) and secure with heavy-duty hose clamps or locking clips.
- **Testing:** Always check joints with soapy water or a leak detection fluid before turning on equipment.
- **Local Suppliers:** You can source fittings and pipeline parts locally in Patna from hardware dealers like [Rajgrih Trading](#) on Exhibition Road or commercial installation experts like [S S Kitchen Equipments](#) in Digha. [If you'd like, let me know:

- What **size or thread type** (e.g., 3/8 inch, 1/2 inch NPT) you need
- Whether this is for **LPG cylinders** or a **panned pipeline**
