An **iron screw** (commonly referring to fasteners made from modern steel variants like mild steel or alloy steel) is an essential, high-strength hardware component designed to join materials together securely without needing a nut.

Top Iron Screw Options

- Features a robust **flat-head profile** designed to sit flush against your working surface.
- Eliminates the need to pre-drill pilot holes in metals or hardwoods thanks to its sharp **self-drilling tip**.
- Highly recommended for structural steel applications, heavy woodwork, and custom cabinetry. [

Key Common Uses

- **Woodworking:** Securing tables, framing structures, and installing sturdy cabinetry hinges.
- **Drywall Installation:** Fastening interior wall sheets securely to thin metal frames or wood studs.
- **Metal Fabrication:** Connecting metal studs, securing roofing sheets, and assembling heavy enclosures.
